word.md

- This is application is similar to Microsoft Word in that it allows the user to create markdown files without having to know the markdown syntax.
- Users will be able to view two documents at the same time that represent the same file, one raw file with markdown syntax and one preview file to preview the compiled markdown file.
- "Hello World" to header 6 "###### Hello World"

- Create a GUI that the user can interact with using scene builder
- Use JAVA to create to implement different features of the markdown such as bold, italicize, headers, and lists
- Adapt the existing open source project by the VS code markdown compiler to adapt into our project using CSS and JavaScript

Java

JavaScript

CSS

Scene Builder
